Justification Statement

The central leadership of the Georgia Clinical and Translational Science Alliance (Georgia CTSA), along with the Evaluation & Continuous Improvement (ECI) program, identified the need for annual discussion and reporting on the status of each program to consistently track and assess the aims and milestones of the programmatic infrastructure that supports clinical and translational research in Georgia. This is necessary to determine when programs need to adjust their plans and milestones in support of their individual specific aims and the overarching aims of the alliance. To serve this goal, the ECI team conducts annual Strategic Planning Activities used to characterize program activities, inform development and monitoring of processes and milestones, and initiate mid-course amendments. Annual Strategic Planning Reports also provide summary evidence of effectiveness and impact in reaching each program’s specific aims and objectives year to year.

The Strategic Planning process consists of ECI developing an approach for strategic evaluation, directors meeting within their programs and then meeting with ECI to evaluate and set goals. ECI collects information on key accomplishments in the previous year, as well as challenges and goals for the next year, in order to evaluate indicators and monitor progress toward accomplishing milestones over the course of a program year. The timeline for the process is predetermined by ECI and communicated to each program to document the program’s progress and provide feedback. This includes completing written strategic planning worksheets and conducting interviews with program directors and team members to discuss the objectives detailed in these documents as well as methods for measuring outcomes. Results are shared with the Executive Council for approval and then included in the annual reports to the External Advisory and Executive Oversight Committees each year. These efforts contribute to more efficient progress toward the aims and goals of all program groups, which, in turn, aid in the aggregate impact of the Georgia CTSA.

Overall Summative Evaluation of 2024 Strategic Planning Activities

An overarching goal for this year's strategic planning activities was to evaluate progress against goals and to open a dialogue on challenges and strategies since the transition to the new grant cycle. The following summative evaluation describes the process and findings of the 2024 Strategic Planning Activities, providing a bird's eye view of the structure, accomplishments, and strategic plans of the Georgia CTSA.

Steps and Timeline

The 2024 Strategic Planning process was initiated in January 2024 with ECI distributing strategic planning materials and conducting individual strategic planning meetings attended by ECI, OGCC, and each program's leadership. Programs detailed current objectives and activities serving their specific aims and answered questions regarding upcoming changes in organizational structure for the next renewal.

Program leaders also discussed how their programs collaborated across groups to make progress toward common goals, broad themes of program successes, translational science emphasis, and health equity, as well as early plans for restructuring in anticipation of the next funding cycle as a UM1 award. ECI drafted brief reports summarizing the findings of each program meeting, including: (1) elevator summary of aims and services; (2) progress against milestones since the last report; and (3) challenges and goals for the next year. Reports were submitted to each program for edits and approval and then included in this report.

Current Success and Future Potential

As part of the strategic planning process, programs were asked to reflect on current successes and how these will integrate into plans for anticipated organizational shifts in the next renewal cycle. This included identifying their most successful offerings/resources, discussing how their program directly supports translational science, and explaining how their program contributes to the priority areas of health equity and/or maternal health. These topics are expected to be critical as the Georgia CTSA restructures from the UL1 to the UM1 grant mechanism. Answers across programs frequently involved continuation and development of successful ongoing activities and expanding scope of work. Some programs have had success through the **collective impact of long-running services**, such as decades of clinical trial support through the GCRCs and training through the KL2 and TL1 programs, and over 16 years of pilot grants and expert consultations. Since 2020, standout accomplishments included **high-profile events** like the annual Southeastern Regional Clinical and Translational Science Conference, **innovative offerings** like Ica’s AppHatchery, and **expansions of services**, including extensions aimed toward timely priorities like health equity or COVID-19. Progress has been made through collaborative efforts across the multiple Georgia CTSA institutions, across programs, and across statewide and nationwide networks. Key accomplishments and plans for each program are detailed in their respective individual summary reports (beginning on p. 8).

Working Cohesively Across a Unified Alliance

Teamwork & Communication Across Institutions

The Georgia CTSA emphasizes operating as a **unified team, leveraging the complementary strengths and resources of four distinct institutions**. To create an alliance that makes more of these institutions than the sum of their parts, program leaders across the alliance deliberately cultivate ties and maintain staff representatives at each relevant partner institution, (see **Table 1**). Staff representation is defined as having leadership or staff with a defined position/percent effort, such that the program has formal operations and financial stake at that institution.

Even when programs do not have staff at all institutions, there has been a sincere effort to strengthen connections across institutions such that programs have team members with unique strengths situated at all institutions that are relevant to their operations. Nearly all programs have teams that collaborate across institutions, including programs focused directly on clinical research (i.e. GCRCs, NetCap, ISP) that operate at Emory, MSM, and UGA. Although GA Tech does not have a clinical research unit, GA Tech investigators do utilize relevant programs to conduct and collaborate on research focused on biomedical engineering and innovative health technologies.

Cross-institutional collaboration also exists beyond operational presence at each institution. Importantly, all Georgia CTSA programs offer their resources (including events, services, consultations, trainings, & grants) to investigators at all four partner institutions and their collaborators. Program leadership and board members come from all institutions whenever possible, and for some resources, such as pilot grants, competitive advantages may be given to projects that involve more than one institution. Cross-institutional collaboration also occurs regularly with other institutions affiliated with the Georgia CTSA, such as with faculty jointly appointed and carrying out operations at Children’s Healthcare of

Teamwork & Communication Across Programs

In addition to cross-institutional communication and collaboration, the Georgia CTSA continues to emphasize **cross-program collaboration as a means of drawing together diverse skills and interests** toward the common mission of the alliance. During the strategic planning process, ECI catalogues instances of cross-program collaborations that serve to enhance the impact of program support. **Figure 2** depicts collaborative ties among programs as of 2024, which includes shared activities that produce a shared product or achievement, claimed by and serving the aims of both programs. For example, BERD collaborates with the Pilots program to offer, administer, and track pilot grants for work in biostatistics, epidemiology, and research design.

The Program Collaboration Network reveals that, on average, programs work with about 8 other programs, with considerable variability. Programs such as OGCC and ECI touch all programs through their overarching role in the administrative home. Programs like NetCap, GRCs, and Peds, also reach across many programs through common interests in ethical and inclusive human subjects research. The network includes 80 out of 120 possible collaborative ties, a substantial increase over the previous year (see **Appendix A** for detailed collaboration grid), signifying a **solidly connected collaboration network, with opportunity still to forge new connections.**

In addition to cross-program collaborations, programs work toward ambitious common goals in parallel, even when not working in tandem. It may not be necessary or advantageous for programs to work on specific projects together, but the Georgia CTSA may still play an anchoring role in maximizing such efforts via cross-promotion, shared resources, and central coordination, preventing duplication of efforts and encouraging cooperation wherever relevant.

Teamwork and Communication Across Georgia & Beyond

Making a **conscious effort to extend operations across the state of Georgia (and beyond)** remains a priority for the Georgia CTSA. Programs have worked toward achieving this goal by incorporating new partners and services that address issues of statewide or even nationwide concern. One notable way in which the Georgia CTSA reached beyond Atlanta was a Grant Writing Workshop, held by CE and the State Office of Rural Health, for rural community members. ISP and CE also leveraged statewide networks through community health workers, UGA’s Archway and Extension programs, and steering board members from across the state. ISP’s Fishers of Men program, a collaboration with UGA, MSM, GA Dept. of Public Health, community organizations, and rural churches, is a T4, community-based, multilevel intervention to address disparate outcomes among rural men with or at risk for chronic diseases.

Figure 2. 2024 Program Collaboration Network

Ica's AppHatchery developed a Georgia TB Reference Guide app for healthcare workers that results in faster and more effective patient care. With over 900 downloads to date, this work on tuberculosis has been further recognized by ranking #1 among TB management applications on the Apple App Store.

Where possible, Georgia CTSA activities reach not only across but beyond the state of Georgia. The annual **Southeastern Regional Clinical and Translational Research Conference** benefits from a wide geographic scope with attendees from neighboring CTSA hubs in Florida, Alabama, and South Carolina. This successful, three-day event makes a clear contribution to clinical and translational science in the southeast region by creating a forum for the exchange of ideas and opportunities to create and strengthen wide professional networks. The 2024 conference hosted **330 attendees from 23 institutions and organizations** across the southeast (See **Figure 3**) and was given a rating of 4.5/5 stars by post-event survey respondents. Keynote speakers have included Drs. Joni Rutter and Mike Kurilla from NCATS and Dr. Christine Lee from the FDA.

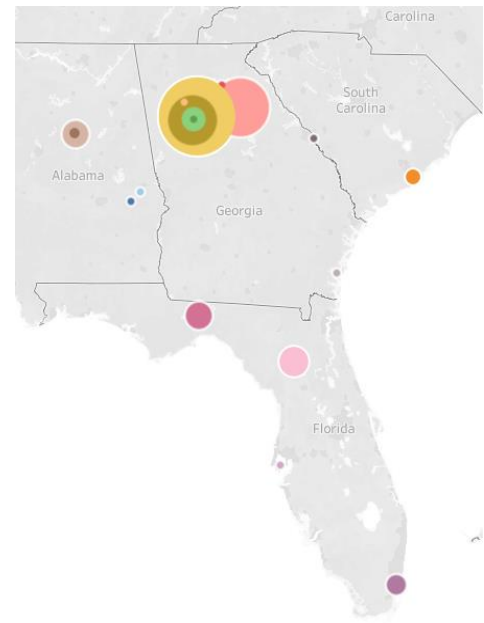

Figure 3. 2024 SE Regional Conference Attendees' Home Institutions

Also beyond Georgia, several **cross-hub collaborations** have been undertaken, including TWD partnering with University of Southern California (SC-CTSI) to continue to develop a shared Course Catalog platform with an online education library providing high-quality training opportunities for clinical research professionals, and ECI chairing the national CTSA Evaluators Bibliometrics Workgroup and collaborating with many of its members on CTSA-wide evaluation projects and manuscripts.

Recent years have also seen a dramatic increase in **scholarly dissemination** of translational science research authored by CTSA program teams. Since 2020, over 60 publications have been authored by members of CE, ECI, ICa, Infor, ISP, NetCap, Peds, RKS, and TWD, across all four institutions. Many publications reflect collaborations across institutions and programs that publicize the CTSA's advances in translational knowledge, activities, and methodologies. **Appendix B** lists selected CTSA team publications published in the past reporting period. This is evidence of an accumulation of

exceptional productivity over the past years of the grant as well as a capacity to see projects through from conception to evaluation to public distribution. These activities show that the reach of the Georgia CTSA does not stop at the state border and that opportunities for productive collaborations are embraced whenever possible.

Next Steps: Strategic Plans for Grant Cycle 4

Leadership Retreat

The Georgia CTSA met as a group in December 2023 for our annual Leadership Retreat. Over the course of this day, PIs, Directors, and staff exchanged information and ideas regarding the current state of the alliance. Presentations and group brainstorming sessions resulted in some common impressions and themes expressed among many of the individuals who were present. With new leaders joining the group, the time was right to explore new ways to optimally organize and govern the hub moving forward. The organizers specifically asked the group

ECI led an innovative bibliometrics study that revealed national CTSA impact on policy. Over the past 15 years, 13% of CTSA's 118,490 publications were referenced in policy documents which represents a 30% increase over non-CTSA health related publications.

how functions and cores could better collaborate, and how we could position ourselves to address the next PAR. Key points that emerged from these group discussions and presentations included the need to begin forming working groups around the Modules that will form the upcoming UM1 award, and the need to improve understanding and emphasis of translational science in contrast to translational research), including solidifying a plan for the Element E translational research project.

OGCC plans to continue to organize these goals around the NCATS 3Ds-Develop, Demonstrate, Disseminate. *Develop* will include improved internal communications using TEAMS, and adoption of new PAR language in this communication. It will also involve harmonizing rather than competing with

institutional services. Finally, this will include development of customer discovery efforts via needs assessment for popular services and additional service needs. *Demonstrate* will include validating and demonstrating return on investment through measurable outcomes and dashboard metrics reported quarterly or monthly. *Disseminate* will include updates to the Georgia CTSA website, sharing of success stories and metrics with institutional leaders and the CTSA consortium, and more proactively planned Road Show presentations, both for established investigators and as part of welcoming new investigators. We will focus our Communications strategy on employing a collaborative, multi-prong, and results-driven approach to reach key internal and external audiences with targeted messaging to increase awareness and use of Georgia CTSA’s resources, support programs, and successes. An updated Impact Report will be created to highlight the difference Georgia CTSA makes to the people we serve in Georgia and beyond.

GCRCs provided critical support for flu and Shigella human challenge studies. These challenge models could decrease the morbidity and mortality associated with influenza and enable researchers to test a Shigella vaccine.

Conclusion

The strategic planning meetings that followed the leadership retreat have served to kickstart the new grant renewal, initiating discussion and reflection regarding program status, challenges, and plans for the current grant and beyond. The leadership of the Georgia CTSA will utilize this document to inform ongoing strategic plans and alliance-wide priorities. This report will serve to brief the External Advisory Committee, which will meet in March, on the ongoing activities and accomplishments of the alliance. With a strategic planning process that allows programs to optimally serve their specific aims and the overarching goals of the alliance, the Georgia CTSA is now well-positioned to pursue peak productivity toward common goals over the next five years.

Individual Program Summary Reports

The following reports condense the main findings of each individual strategic planning meeting in terms of:

- (1) an elevator speech summary of aims and services
- (2) explanation of progress against milestones since the last report
- (3) description of challenges and goals for the next year
